Overview

INETCO Insight® 6.1.8 is an update from INETCO Insight 6.1.7.

Highlights of this release include:

- Console enhancements
- Manager enhancements

❖ **WARNING**:
Any update from INETCO Insight versions prior to 6.0.5 will require new license serial numbers from INETCO. If applicable, contact your INETCO Support Representative before installing this release to avoid unnecessary downtime.

❖ **NOTE**:
INETCO Insight Collector 6.0.11 or above is recommended for operation with this release of INETCO Insight.

Console

The following enhancements improve the flexibility and usage for the INETCO Insight Console user:

- Entity property fields updates:
  - These fields are now available to be included in transaction summaries, allowing them to be filtered upon through Console.
  - They are now also available for defining interval statistics rules.
- Transaction details now only show entity property fields and values that are currently configured.
- Entity and entity property columns are now visible in transaction logs by default.

  Note: This change only takes affect when determining how to display columns that have not been visible before, so for existing Console users it will only apply to new entity types or property names added or, for new users logging into Console for the first time it will apply to all entity types and properties.
- The count of transactions shown in health check widgets show the count over 1 minute or 5 minutes depending on configuration.
- Line Chart, Area Chart, Histogram Chart, and Health Check now have the option to display 1-second data points when showing 5-minute period.
- Topology limits have been increased to maximum 150 links and 150 nodes.

Manager

The following improvement has resolved an existing issue:

- Entities configuration grid in Insight Manager now scrolls properly after adding an item to a list spanning multiple pages.
